

# Week-2: Code-along

202207: Computational Media Literacy  
2023-08-17

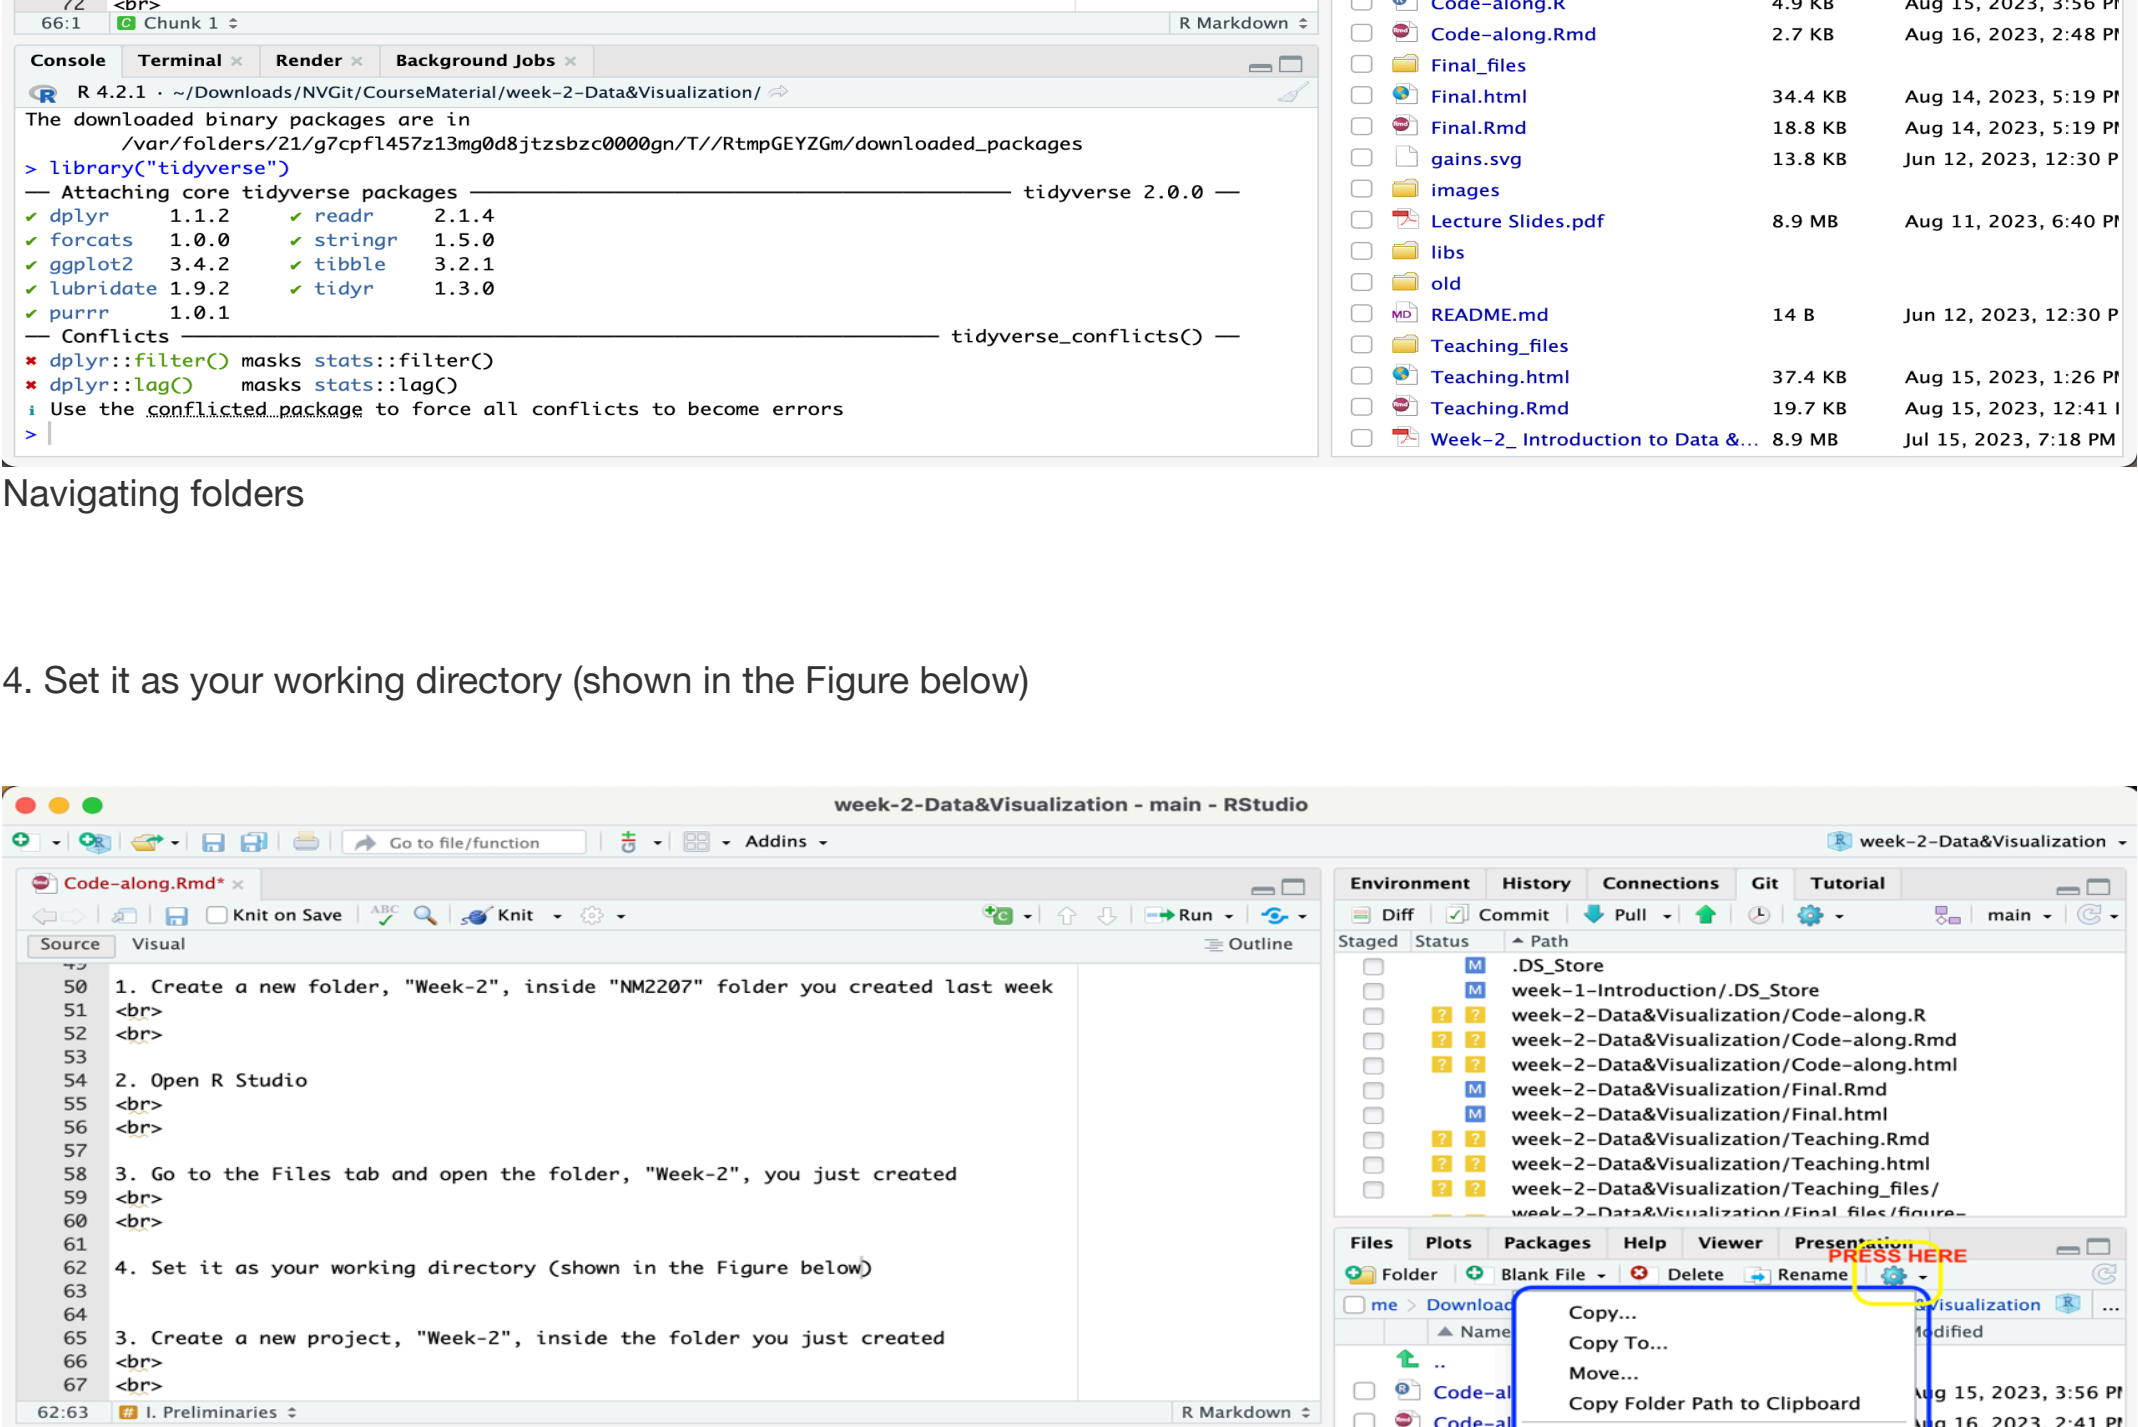

**Welcome!** Go through the steps described below, *carefully*. It is totally fine to get stuck - **ASK FOR HELP!**; reach out to your friends, TAs, or the discussion forum on Canvas.

Here is what you have to do,

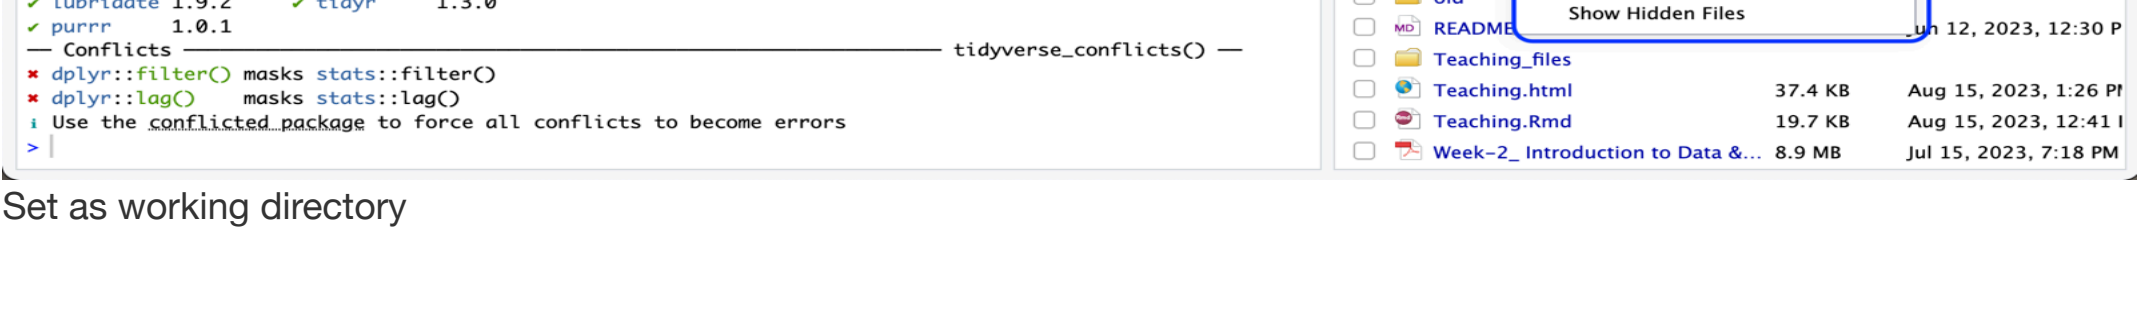

1. **Listen** to the video lectures, and while doing so,
2. **Follow** the instructions in this file

## I. Preliminaries

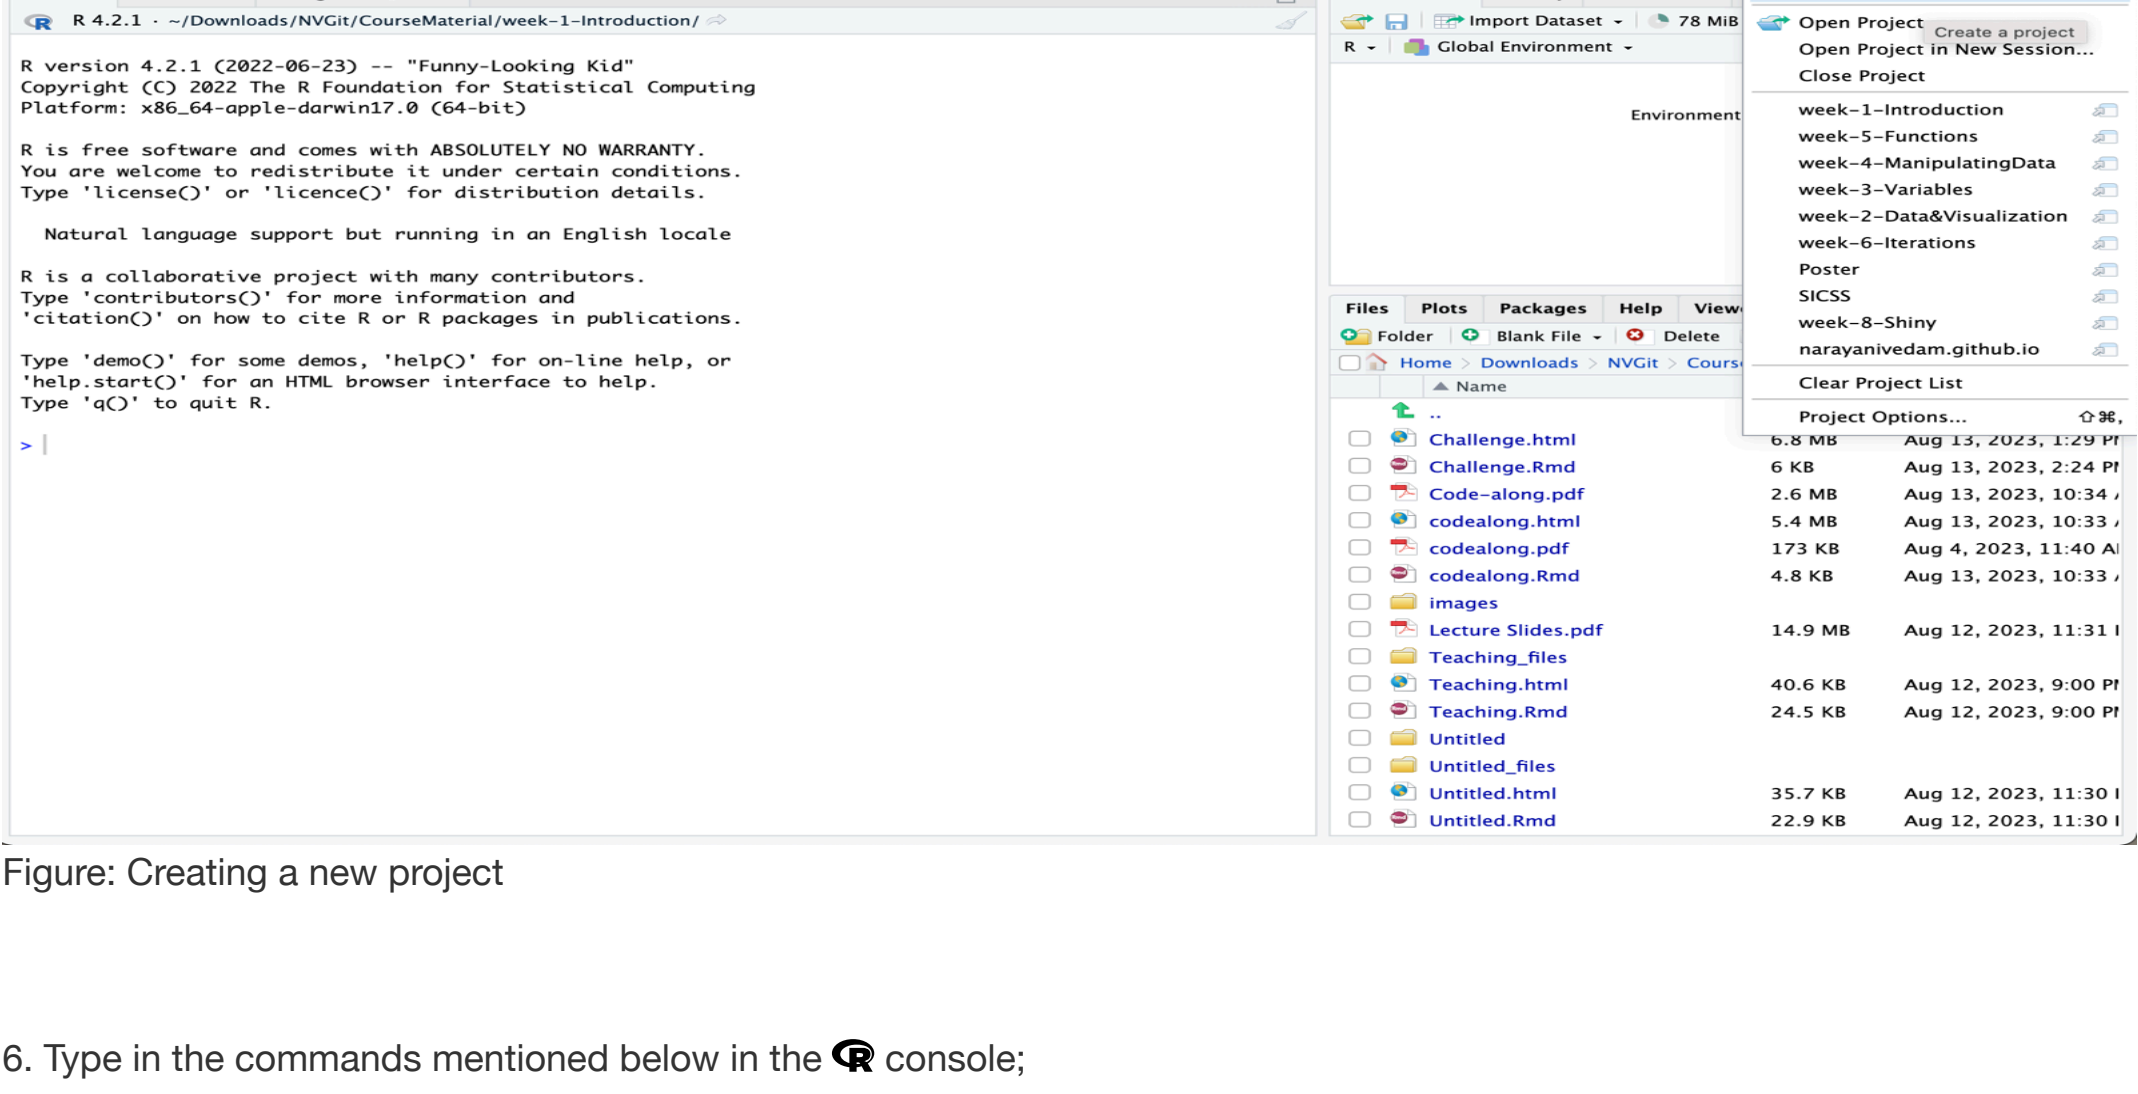

1. Create a new folder, "Week-2", inside "NM2207" folder you created last week
2. Open R Studio
3. Go to the Files tab and open the folder, "Week-2", you just created
  - Press the three horizontal dots highlighted in the Figure below
  - Browse and select "Week-2" folder inside "NM2207"

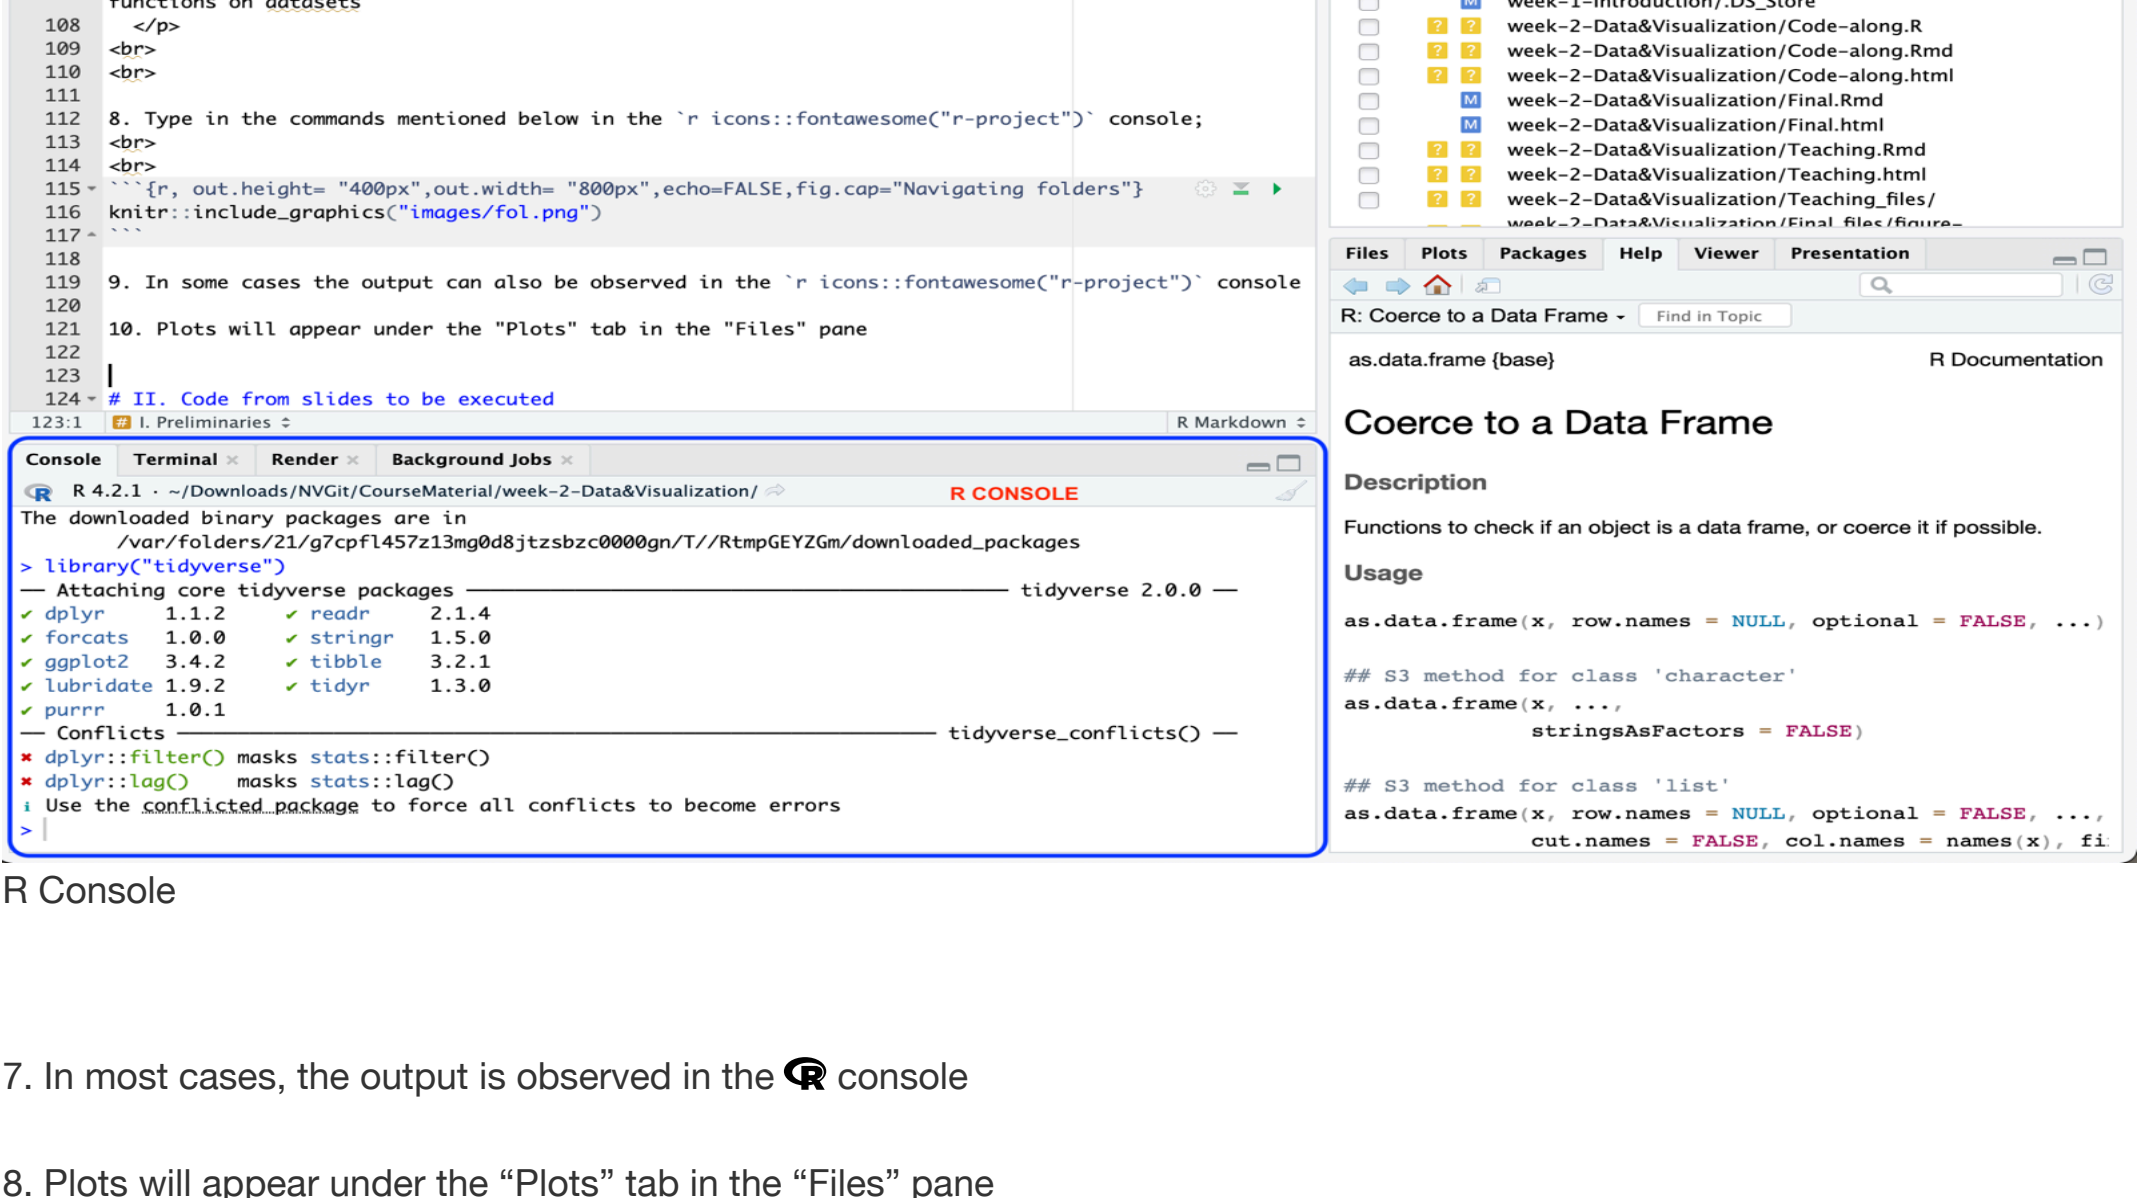

4. Set it as your working directory (shown in the Figure below)

5. Now, create a new project and name it "Week-2"

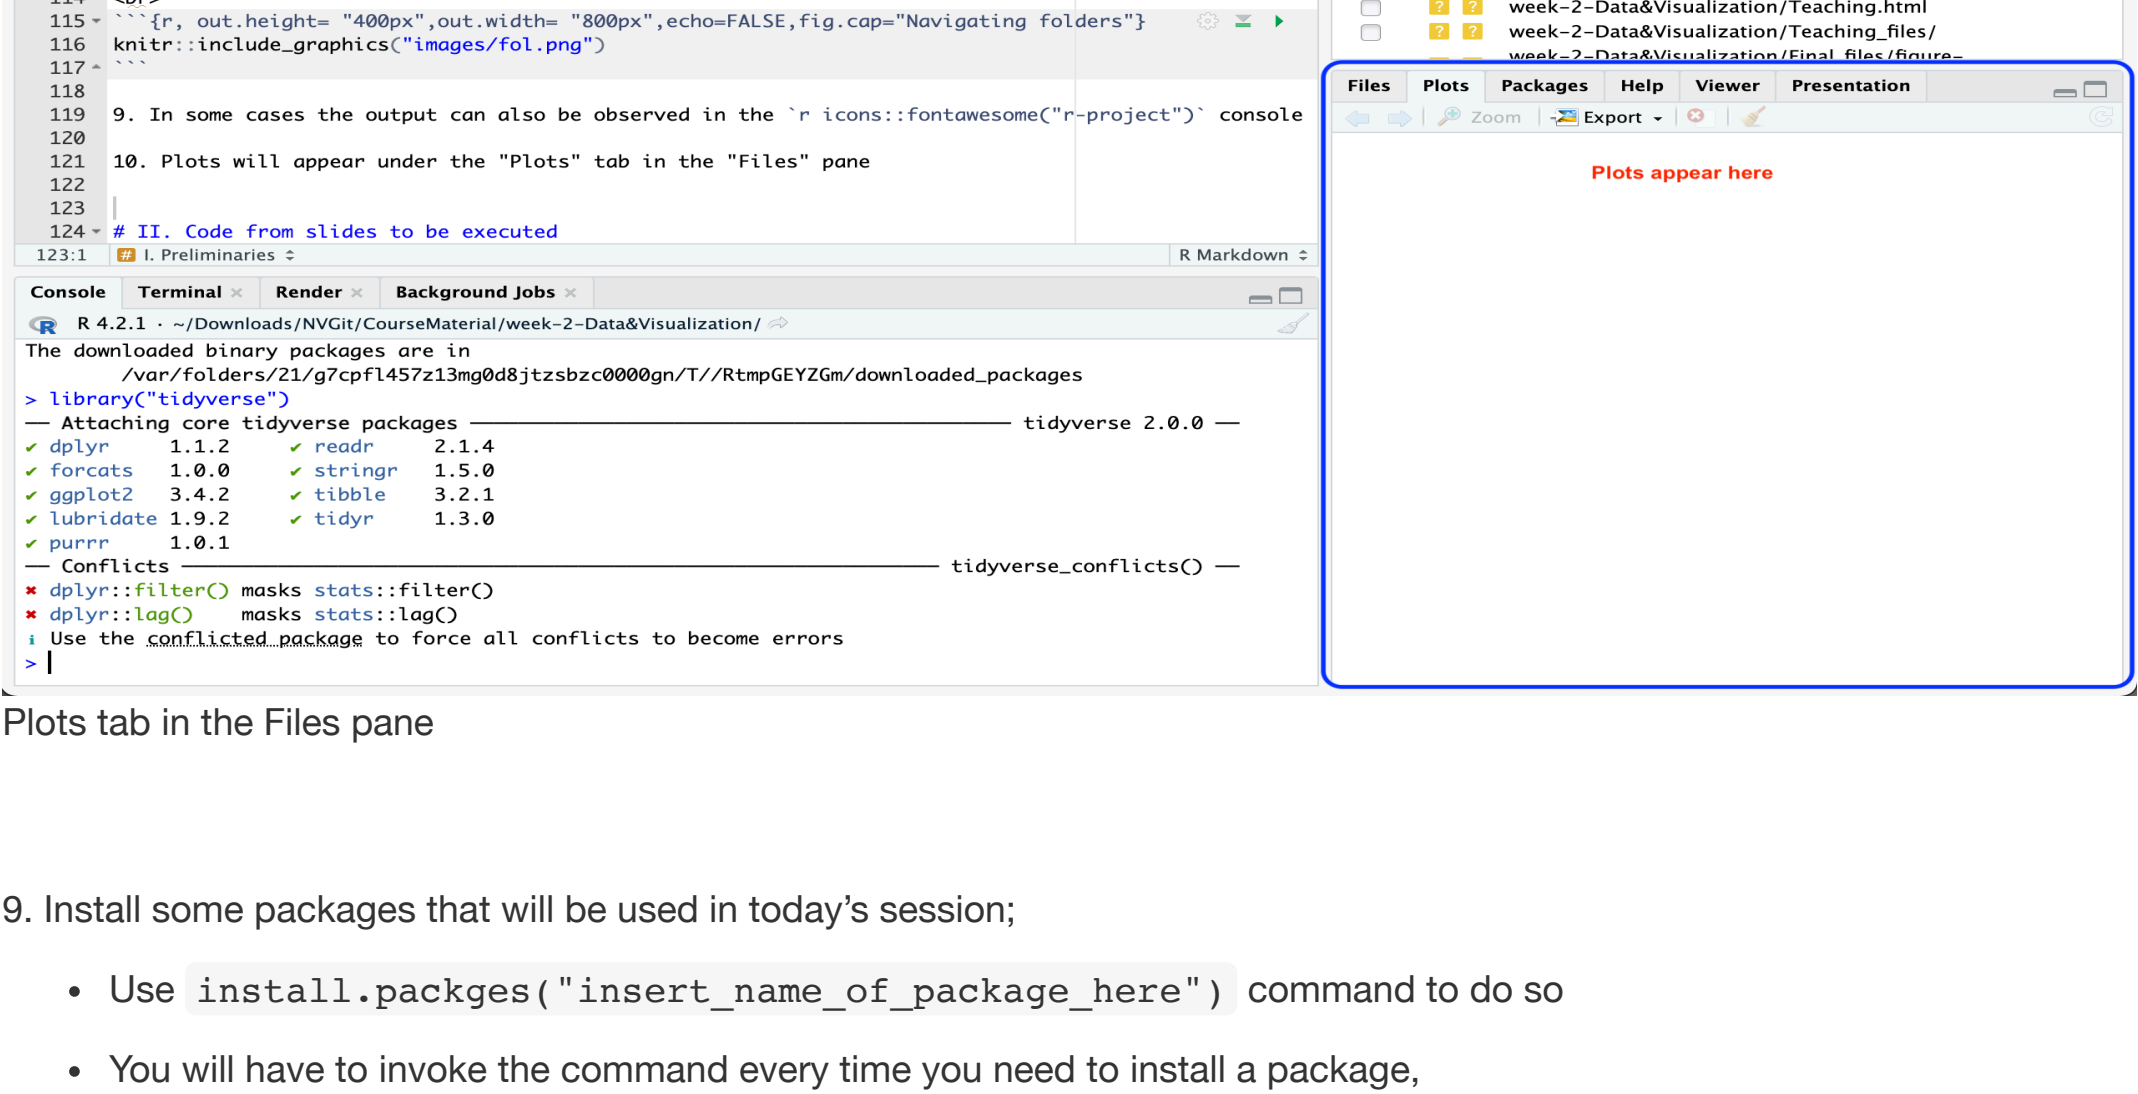

6. Type in the commands mentioned below in the **R** console;

7. In most cases, the output is observed in the **R** console

8. Plots will appear under the "Plots" tab in the "Files" pane

9. Install some packages that will be used in today's session;

- Use `install.packages("insert_name_of_package_here")` command to do so
- You will have to invoke the command every time you need to install a package,
- These are the packages, `tidyverse`, `ggplot2`, `shiny`
- Copy the commands below, one at a time
- Paste them in the **R** console
- Press enter
- Messages will be printed on your screen about the progress
- Here are the commands to install **R** packages
  - `install.packages("tidyverse")`
  - `install.packages("ggplot2")`
  - `install.packages("shiny")`

10. Once you complete the installation of packages, load them;
- Use `library(insert_name_here)` command to do so
- Copy the commands below, one at a time
- Paste them in the **R** console
- Press enter
- Here are the commands,
  - `library(tidyverse)`
  - `library(ggplot2)`
  - `library(shiny)`

## II. Code from slides to be executed

1. Copy the commands inside the shaded box
2. Paste them in the **R** console, one at a time
3. Press enter and observe the output
4. Pay attention to what each line of code manages to execute

### Slide Number 5

```
# Load R packages for data science
library(tidyverse)
# Data in starwars data-set
starwars
```

### Slide Number 7

```
# Salient features of the data-set
?starwars
```

### Slide Number 8

```
# Catch a glimpse starwars data-set
glimpse(starwars)
```

### Slide Number 10

```
# Access column "height"
starwars$height
```

### Slide Number 11

```
# Access column "mass"
starwars$mass
```

### Slide Number 12

```
# Access column "gender"
starwars$gender
```

### Slide Number 13

```
# Access column "gender"
starwars$films[1:3]
```

### Slide Number 14

```
# Rows of interest
filter_rows <- c("Luke Skywalker", "R2-D2", "Darth Vader") # Extract row corresponding to Luke Skywalker
starwars %>% filter(name==filter_rows)
```

### Slide Number 15

```
# Rows of interest
filter_rows <- c("Luke Skywalker", "R2-D2")
# Extract row corresponding to Luke Skywalker
starwars %>% filter(name==filter_rows) %>% select(name,height,mass,homeworld,films)
```

### Slide Number 16

```
# Rows of interest
filter_rows <- c("Luke Skywalker", "R2-D2")
# Extract rows in 'rows'
starwars %>% filter(name==filter_rows) %>% pull(films)
```

### Slide Number 17

```
# Number of rows in the data-set
nrow(starwars)
ncol(starwars)
dim(starwars)
```

### Slide Number 23

```
# Invoke the library
library(Tmisc)
# Filter data-set I in quartet
quartet %>% filter(set=="I")
```

```
# Invoke the library
library(Tmisc)
# Filter data-set I in quartet
quartet %>% filter(set=="II")
```

### Slide Number 24

```
# Invoke the library
library(Tmisc)
# Filter data-set I in quartet
quartet %>% filter(set=="III")
```

```
# Invoke the library
library(Tmisc)
# Filter data-set I in quartet
quartet %>% filter(set=="IV")
```

### Slide Number 25

```
# Obtain the needed statistics
grouped_quartet %>%
  summarise(
    mean_x = mean(x),
    mean_y = mean(y),
    sd_x = sd(x),
    sd_y = sd(y),
    r = cor(x, y) )
```

### Slide Number 29

```
# Plot the data
ggplot(data=starwars)
```

### Slide Number 30

```
# Plot height along x-axis
ggplot(data=starwars, mapping=aes(x=height))
```

### Slide Number 31

```
# Plot mass along y-axis
ggplot(data=starwars, mapping=aes(x=height, y=mass))
```

### Slide Number 32

```
ggplot(data=starwars, mapping=aes(x=height, y=mass)) +
  geom_point()
```

### Slide Number 33

```
ggplot(data=starwars, mapping=aes(x=height, y=mass)) + geom_point() +
  labs(x="Height (cm)", y="Weight (Kg)")
```

### Slide Number 34

```
ggplot(data=starwars, mapping=aes(x=height, y=mass)) +
  geom_point() +
  labs(x="Height (cm)", y="Weight (Kg)",
  title="Mass versus Height")
```

### Slide Number 35

```
ggplot(data=starwars, mapping=aes(x=height, y=mass)) +
  geom_point() +
  labs(x="Height (cm)", y="Weight (Kg)",
  title="Mass versus Height",
  caption="Source: tidyverse/ starwars dataset")
```

### Slide Number 40

```
# Install package
install.packages("shiny") # Invoke the package
library(shiny)
# Run an example from the library
runExample("01_hello")
```

### Slide Number 42

```
# Install package
install.packages("shiny") # Invoke the package
library(shiny)
# Run an example from the library
runExample("06_tabsets")
```
